

# Dedicated Internet Access

Whether your need is for web or email hosting, virtual private networking, handling large file transfers, or simply providing Internet access to employees, **Dedicated Internet Access (DIA)** from DSCI provides high-speed, always-on connectivity.

## Benefits

### Reliability

With 24/7/365 monitoring of circuit and router by the DSCI vNOC (virtual Network Operations Center), performance and uptime are guaranteed and backed by our comprehensive Service Level Agreement (SLA).

### Flexibility

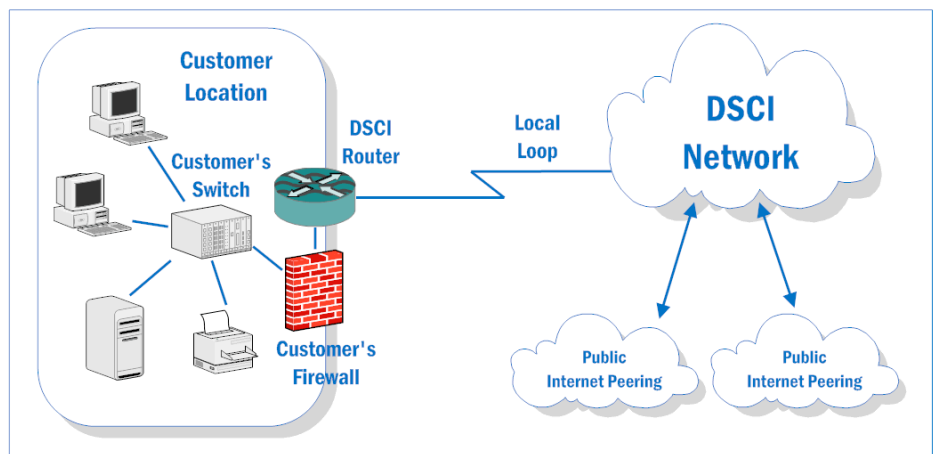

With service available from a single T1 at 1.5 Mbps to speeds up to 300 Mbps over Metro Ethernet, you select the bandwidth you need today. Should your needs change, your bandwidth can be increased to scale with your business needs. With the Burstable DIA option, bandwidth can “burst” beyond your committed rate to provide bandwidth on demand as needed.

### Guaranteed Bandwidth Availability

Unlike DSL or cable, bandwidth is guaranteed regardless of local loop mileage and provides the same upload and download speeds.

### Support for Essential Business Operations

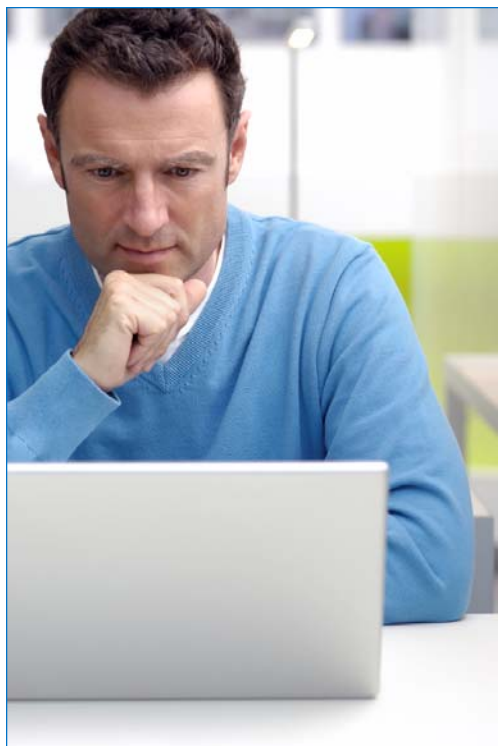

Businesses are relying more and more upon the Internet and web-based applications to stay competitive in today’s business environment. Access that is reliable and provides performance guarantees is essential to keep your business functioning.

Dedicated Internet Access  
from DSCI

# Dedicated Internet Access

## Features

### Bandwidth Choices

Bandwidth options include: Single T1 at 1.5 Mbps, Multiple T1s at 3.0-12 Mbps, DS3 at 9 to 45 Mbps or Metro Ethernet at 5 Mbps to 300 Mbps.
