

## Business Lines & Trunks

Simple and reliable telephone service for your business

Business lines, also known as POTS lines, provide single-line analog connection from your office to the local phone company and is the most widely used line service type in the United States. Business lines provide basic connection to the telephone company's central office and are ideal for businesses that do not require complex telecommunications services. These lines are found in businesses of all sizes and are used for everything from backup to complex services, as well as fax and modem services.

### Features

- Used primarily for voice, fax, low-speed dial-up internet access or data transmission.
- Analog business lines are designed for voice services
- For data, a modem may be used to send digital information over business lines at a rate of up to 56 Kbps.
- Includes common services such as Emergency Number Service (911) and Operator Services such as directory assistance and long distance
- Can handle inbound and outbound calls

### Added Features

These are additional available options.

- Line Hunting
- Caller ID
- Call Waiting
- Call Forwarding
- Three way conference calling
- Voice messaging
- And many more...

### Benefits

- **Easy to Use:** A simple, easy to use telephone service that allows you to communicate with your business contacts. Ideal for smaller-sized businesses that do not require a large number of phone lines, the features of a PBX, or a full T1
- **Reliable:** Clear and reliable communication
- **Available anywhere:** Business lines are the most widely used local service in the U.S.
- **Easy set up:** No complex installations and minimal hardware is required
