

Polycom® Productivity Suite

Improve the speed of business with a unique set of applications that turn your SoundPoint IP phones into an enhanced productivity tool. With these unique applications, your IP phones help your company communicate and collaborate more productively.

Benefits

- ▶ Enhance workforce productivity while using the phone.
- ▶ Deliver intuitive visual control and management of four-party conference calls with unique features such as far-end muting of participants.
- ▶ Eliminate directory duplication and accelerate time to connect to your contacts.
- ▶ Record calls on-demand for legal record, archiving, playback, and publishing.

Features

Visual Conference Management

This application provides an intuitive visual interface to set up and control a four-party conference from the phone's display, including the ability to easily add, drop, split, mute, and put callers on and off hold. Visual Conference Management eliminates the complexity of using cumbersome "codes" to manage conferencing features.

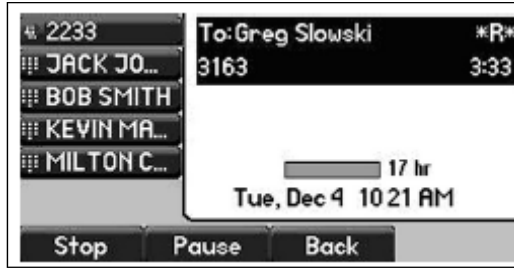

Intuitive visual control and management of a four-party conference call right from your Polycom SoundPoint IP phone.

Local Call Recording

This application enables users to record any conversation locally on the SoundPoint IP 650 phone using a standard external USB drive. All the calls are recorded in the highest audio quality for excellent playback performance. This application is especially helpful in regulated industries such as legal and finance, where calls may need to be recorded for regulatory or record-keeping purposes.

Polycom Productivity Suite

All recordings are time and date stamped for easy archiving and playback.

The recording files in .wav format can be played back on the phone or a PC.

The Local Call Recording application supports most popular USB drives with up to 2GB of storage. A list of tested and approved USB drives is available in a separate technical bulletin available on DSCI's website at www.dscicorp.com/ipbx_phones.php.

Corporate Directory Access

This application enables any SoundPoint IP phone to connect to an LDAP-compliant data store (including Microsoft® Active Directory) that contains all corporate contacts, eliminating the need to maintain multiple directories. Users can search on first name, last name, or phone number and create a filtered list of contacts to browse, select, and call. They can also opt to store any LDAP contact into their local contact directory. As a result, users can connect to their colleagues and business partners faster and more easily.

Easily browse and select a contact from an integrated corporate directory on the phone.

Feature	Supported Phones
Visual Conference Management	SoundPoint IP 550, 560, 650
Local Call Recording	SoundPoint IP 650
Corporate Directory Access	All SoundPoint/SoundStation IP phones
